

Eco-system

MADE BY *Elly*

On the left side you can see how to fill the jar/pot. The base is a lot of hydro-granules, than a layer of charcoal (pond filter coal), to keep everything pure and then place a layer of earth for cacti or potting soil for normal plants.

If there is too much moisture in the jar, the glass will batter. Than remove the lid for some time. Don't place the pot in direct sunlight. To decorate use stones, shells, pieces of wood or bark, little branches, statues, dinosaurs .. everything can be used! Use your imagination!
